

Coated Solid Carbide Drill

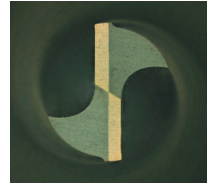

FCS Coating

"NEO-PRO"

Micro Drill "NEO-PRO" Series, for Steels Features of ADR-SV, ADRS-SV, ADRL-SV Drills

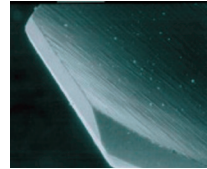

Features

■ This micro drill is specifically developed for multi-hole drilling in steels, such as carbon steels, alloy steels and hardened steels. Wide chip pocket enables smooth chip evacuation under high speed and feed drilling conditions.

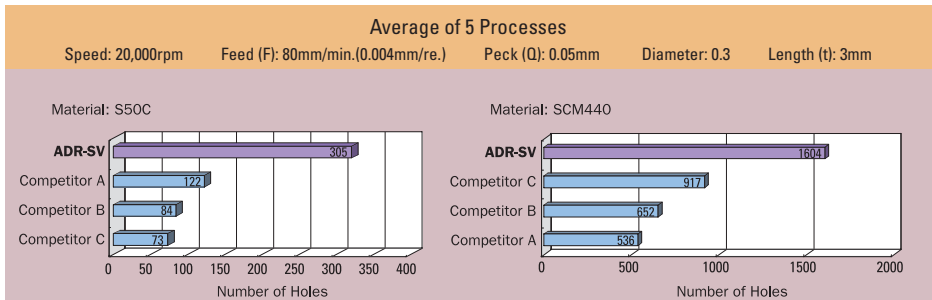

■ The "NEO-PRO" series offers three different flute lengths. Users may choose drill based on the depth of hole.

■ The Fine Coating System (FCS) especially developed for micro drills keeps edge sharp, allowing excellent cutting performance and wear resistance.

■ Slight honing on drills over $\phi 1.6$ mm prolong tool life while preventing chipping in high speed and high feed drilling conditions.
